XM traffic and weather is the only reliable road report I have ever found. They offer realtime information on many commuter roads the other broadcasters ignore, and the continuous realtime update means there is never a 20 minute wait. Not only useful on my everyday drive into DC, it's a great tool for planning trips into other metropolitan areas.

XM radio content should only be dictated by the customers with active memberships. The intent of the NAB to try and block the content of a pay service is absurd and I urge you to reject the NAB's petition 04-160.
